

ROOTBEER REPORT

This project commenced approximately 350 weeks ago, and during this time, it has seen significant activity with 31 distinct source files being actively edited and committed by a total of 19 different authors. These files are conveniently organized along the x-axis, indexed from 1 to 31.

Over the course of these 350 weeks, it is noteworthy that work has been consistently executed on all files, maintaining a relatively steady cadence of commits. In the project's early stages, there were rarely more than 10 weeks between each commit to the main branch.

A discernible pattern emerges when examining the commit history. While the dark green author played a pivotal role in shaping the project's inception and recent developments, the light green author has exhibited exceptional commitment. With unwavering dedication, they have made substantial contributions and consistently committed changes throughout the entire project's timeline. This report also required minimal git commands aside from cloning the repository.

Files 15-22 underwent the most significant transformations, closely followed by files 2, 4, 5, and 9, which also received regular updates. The dark green author spearheaded the project's early creation and recent enhancements, while the light gray author provided valuable support. However, it is essential to underscore the indispensable role played by the light green author, whose tireless efforts and consistent contributions have left an indelible mark across the project's entire spectrum.
