## Git and Github: Executive Summary

### Highlights

- **Top Contributors** – Overall the top contributors for the scottyab/rootbeer were two individuals: Scott Alexander-Bown (scottyab) with 51 total commits and Matthew Rollings (stealthcopter) with 46 total commits. The remaining contributors had total commits amounting to less than 10 each. The timeline of their contributions can be seen here:

- **File Contributions** – Throughout the project’s lifetime contributions have been consistently made. During the project’s initial creation week, the most contributions have been made with the week within the last year having the next most contributions. A scatterplot with such statistics is shown here:

### Comments

There were several “git” commands that were useful in completing this assignment. Such commands are:

- “git checkout <branch>” – allowed the creation and traversing of branches easily
- “git log” – allowed the commit history of the project to be displayed in a simple way
- “git show <commit>” – allowed the in-depth viewing of various commits in the project
